

What is side loading?

Side loading is the process of copying Android applications from your computer to install on your Scroll.

Many Android app sites now allow you to download App files (.apk) to your computer so you can copy them to your Android device for installation.

Follow the instructions below to install apps on your Scroll.

-
- 1** Download .apk files to your computer from your favorite Android apps website and save them in an easy to find folder.

 - 2** Connect your Scroll to your computer using the included USB cable (use the USB port labeled USB)

 - 3** Press the physical Menu button on your Scroll and select Notifications

 - 4** For the Notifications list select USB Connected (internal) then Mount when prompted

 - 5** Your Scroll will now appear to your computer as removable storage.
*Windows users go to My Computer, the Scroll will usually present as a drive named A
** Mac users will find the Scroll appears on the desktop once mounted as a drive named A

 - 6** You now need to copy the apps (.apk files) you have downloaded from your computer to the Scroll. Simply copy the apps from the folder you are storing them in then paste them in on the removable disk A which represents the Scroll's internal storage

 - 7** Once you have copied all the apps you want to your Scroll you need to unmount your Scroll. Press the physical menu button, select Turn off USB Mass Storage – Turn Off (when prompted)

 - 8** Disconnect the USB cable from both your Scroll and computer

 - 9** On your Scroll open the App Installer application and select to scan the “/nand”

 - 10** The app files you copied to your Scroll should now appear in a list

 - 11** Select the app you wish to use, click Install and the app will then be installed ready for use on your Scroll
-
